

**OVERVIEW**  
DATA COLLECTION SERVICE

Customized Technological Solutions

## ALL THE NETWORK IN ONE CLICK

*The solution to remotely monitor  
the sales network.*

**OVERVIEW** is the system for the remote management of the network.

- It allows to collect data about the sales and to aggregate them.
- It performs analysis and statistics, integrating also the historical data.
- It controls tank levels and manages loads.
- It sends prices per system and per sales Modes and monitors competitors' prices.
- It sends prices to the Ministry.
- It is compatible with Gilbarco, Tokheim, Wayne.
- It reports any anomaly in real time wherever it occurs on the network.
- It has a dedicated app and a help desk for the assistance.

With **OVERVIEW**, being distant is not a problem anymore!

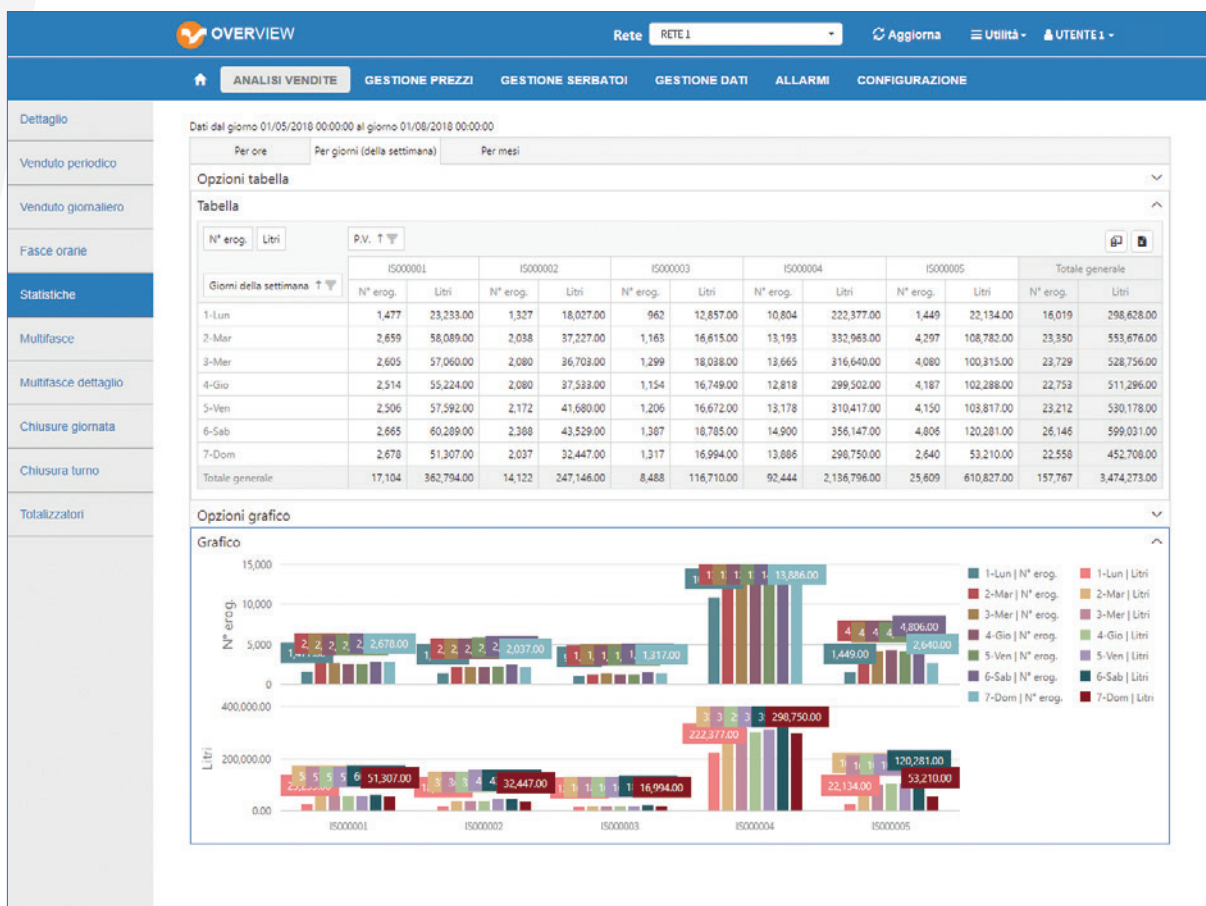

# Data collection

Data are collected once or several times a day, or when requested by the customer, through the dedicated control:

- Details of each transaction.
- Totalizers.
- Close of the day.
- Close of the shift at the station.

The dedicated web area allows you to view, process and analyse data.

Export functions are available in PDF, CSV and Excel.

# Level data collection

Physical inventory data are collected on each individual tank.

The customer accesses the dedicated web area that provides: views, processing and analysis of data.

Export functions are available in PDF, CSV and Excel.

The screenshot displays the 'OVERVIEW' web application interface. The main content area shows a list of tanks with detailed data for each. The data is organized into a grid of five tank profiles, each with a semi-circular level indicator and a table of specifications.

# Sending of prices to MISE

ICAD Sistemi is certified for the automatic sending of sales prices to the Ministry. By purchasing the service, the customer may delegate the communication to ICAD Sistemi.

## Automated data export

- Through specific tools, data can be made available to the administrative program of the customer.

## APP Overview

- Through the APP, it is possible to consult sales data of the individual plants
- By creating credentials, the manager may:
  - Enter the prices of nearby plants.
  - Upload DAS data.
  - Change the closing of the day, entering the sales through POS which are not connected to the station computer.
